Integrais

- As integrais podem ser utilizadas para calcular área de regiões bidimensionais, isto é, área de triângulos, quadrados, e entre outros polígonos.
- Podemos utilizar integrais múltiplas também para esse fim. Mais que isso, serão usadas para calcular volume de sólidos!

Integrais múltiplas

Como calcular?

$$\int_a^b \int_c^d f(x, y) dy dx = \int_a^b \left(\int_c^d f(x, y) dy \right) dx$$

ou

$$\int_c^d \int_a^b f(x, y) dx dy = \int_c^d \left(\int_a^b f(x, y) dx \right) dy$$

Propriedades

1)

$$\int_a^b \int_c^d f(x, y) dy dx = \int_c^d \int_a^b f(x, y) dx dy$$

2)

$$\int \int_A (f(x, y) + g(x, y)) dA = \int \int_A f(x, y) dy dx + \int \int_A g(x, y) dA$$

3)

$$\int \int_A c f(x, y) dA = c \int \int_A f(x, y) dA$$
